GLOBAL HEALTH & AFRICAN HEALTH SYSTEMS

SAIBATU MANSARAY, PA-C, MIS, FAPH

Global Health Strategist | African Health Systems & International Development Advisor

Saibatu Mansaray is a global health strategist, former senior U.S. government executive, and retired U.S. Army officer whose career bridges federal public health policy, international healthcare operations, and community-led health systems development.

She is the Founder and President of The Mansaray Foundation, a nonprofit organization advancing maternal health in rural Sierra Leone. Through partnerships with local health authorities and international development organizations, she leads initiatives to strengthen maternal healthcare delivery, expand access to essential services, and address barriers to healthcare utilization. The Foundation supports four rural health facilities serving a combined catchment population of approximately 30,000 people across 49 communities.

Previously, Mansaray served in the Senior Executive Service as Assistant Director for Public Health and U.S. Demand Reduction Coordinator at the White House Office of National Drug Control Policy. In this capacity, she provided executive leadership, strategic direction, and oversight in the development of the 2020 National Drug Control Strategy, guiding the alignment of substance use prevention, treatment, and recovery priorities across 33 federal agencies.

Her international perspective is informed by extensive experience assessing healthcare systems, coordinating medical operations, and building cross-cultural partnerships in complex environments. She holds a Master of International Service from American University's School of International Service, a Master of Science in Physician Assistant Studies, and a Bachelor of Science from the University of Nebraska Medical Center.

Mansaray brings to advisory engagements a distinctive combination of executive policy leadership, clinical expertise, and firsthand experience navigating African health systems, donor priorities, and community-defined needs. Her work emphasizes locally led, culturally responsive, and sustainable approaches to global health and international development.
